Remote Deposit Capture

Our remote deposit capture solution allows businesses to deposit checks without complex software installation, setup and configuration. Simply login to your branded site, scan the checks using an approved scanner and submit the deposit. We take care of the rest, including image analysis on the check amount, validating amounts, image quality analysis, detecting duplicates, and enforcing limits.

Remote deposit capture is also a companion feature to any lockbox service and with our product, it is integrated into the lockbox service.
