

Network Design and Installation Services

Turn Your Technologies into a Competitive Advantage

Increasingly, financial institutions are struggling to navigate an ever-changing, complex IT environment. They must integrate new technologies and applications with limited resources; improve how data is stored and managed; stay current on technology security and compliance standards; and closely managed project timelines and costs. All Covered can turn such business challenges into a business advantage.

All Covered's team of technical and project professionals assists hundreds of financial institutions to conquer the ever-present challenges they face. Whether it is managing diverse technologies, evolving business processes, maintaining consistent application performance or providing secure access to information, we are there from concept to completion.

All Covered Network Design and Installation Services are:

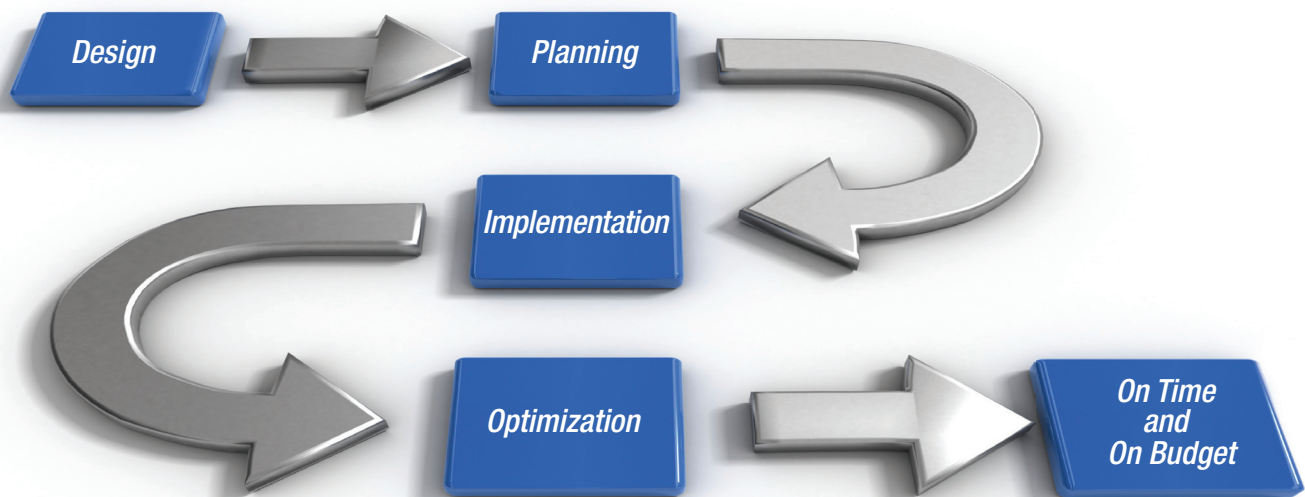

- Delivered by First Class Certified IT, Security and Compliance Professionals
- Managed Using Best-of-Breed Technology
- Audit Approved Processes
- Regulatory Compliant

Ensure Projects are Completed on Time and on Budget

We provide project management and engineering resources from start to finish. Our goal is to ensure on-time completion within your budgetary requirements.

We are your single point of contact and coordinate with additional vendors to communicate project timelines and priorities.

Not Just IT Solutions, Business Solutions.

All Covered's Network Design and Installation Services span areas including business continuity planning, virtualization, storage, application, network infrastructure, data center, messaging and more. Each solution is crafted by certified experts and includes assessment, design, implementation and migration.

Whether you need to improve the experience of your end users, mitigate security and compliance risk, reduce IT expenditures, improve operating efficiencies or introduce new applications to meet your changing business goals, our experts can implement customized solutions to address your technology needs. In addition, we can monitor and manager their performance and free up your IT resources to focus on the business at hand.

Some of our solutions include:

<p>Our support professionals are not only skilled in key infrastructure technologies and financial services applications, but they are also security and compliance experts with industry recognized CISA®, CISM®, CGEIT®, CRSIC®, and CISSP® certifications.</p> 	Key Features	Benefits
	Disaster Recovery and Continuity Sites	Whether branch to branch replication or All Covered's private cloud, All Covered will implement a solution that meets your desired recovery point and time objectives.
	Virtual and Physical Servers	All Covered will evaluate your server needs, provide recommendations and implement the server infrastructure that best meets your computing, business continuity planning and compliance needs.
	Virtual and Physical Workstations	Whether you are utilizing old workstations as new thin clients or upgrading to new standalone machines, All Covered will design, procure, stage, install, migrate and manage all end user workstations.
	Core Processing Migrations	All Covered works closely with your institution to ensure a smooth transition from the old core processor to the new.
	Email Migrations	All Covered will manage your email migration whether it be from one client to another or to a web-based solution. We will minimize the disruption to your employees while moving from one system to the other and ensure all data is available once migrated.
	Cloud Readiness and Migrations	All Covered provides expert advice when migrating from an on-premise solution to the cloud. We can ensure your institution is cloud-ready in terms of bandwidth, application compatibility and security.
